

COATING CARRIERS

To protect a PCB from hazardous environmental influences (e.g. humidity, dust, chemicals, extreme temperatures, etc.) you can apply a coating to your PCB. In order to apply the coating in a professional and qualitative way you require a coating carrier. This will extend the quality and repeatability of the coating applied in your production process.

- **Flexible**
- **Customized**
- **Stackable**

Universal Coating Carrier

To make the handling of the coating carrier machine easier, Contecto has developed a universal coating carrier.

This universal coating carrier is quick and easy to adjust and is equipped with legs, so that it is filled on both table and a conveyor belt.

Thanks to the stacking construction, the carriers can be stored neatly and easily. The coating carrier is available in different versions:

- Standard 350 x 450 mm
450 x 450 mm
- Your desired size
