## SOLDERING CARRIERS

Solder carriers are designed based on the needs of the customer and the product. Contecto offers its customers the possibility to send own designs for the to be produced carrier. On the other hand, it is possible to provide Contecto with PCB data. When the last option applies, our engineers will develop the most suitable solder carrier for your production process.

- **Solid**
- **Labor saving**
- **Quality control**

### Tooling is important in the production of printing circuit boards

In order to be assured of a continuous production process, PCB's should be produced in an accurately dimensioned and dimensionally stable tool. Contecto produces a wide range of production tools for the electronic industry.

Contecto production tooling is designed and manufactured to fit seamlessly into your production process, herewith, absolute manufacturing reliability can be guaranteed.

Contecto production tooling will be produced strictly in accordance with your specifications. Our foundation for a perfect and fast realization: materials with the best quality, CNC precision guided production with special tooling and more than ten years of experience. PCB gerber information will directly be sent to the CNC machines through our CAD/CAM system. Besides that, we are able to engineer special tooling, using your prototype.

Our engineers are qualified and have extensive experience in the electronic and mechanical engineering. Received production data will be subjected to a standard evaluation and, if necessary, we will give suggestions to increase efficiency in your production line.
